

WHAT IS CLAIMED IS:

1. A method of transmitting display data in a mobile terminal having a display, comprising the steps of:
- 5 storing data displayed on the display as display data upon request for capturing the displayed data from a user;
- determining whether the display data is text data or graphic data;
- transmitting the display data by a predetermined text transmission function if the display data is text data; and
- 10 transmitting the display data by a predetermined graphic transmission function if the display data is graphic data.

2. The method of claim 1, wherein the text transmission function is at least one of an SMS function, an E-mail function, and a data
- 15 communication function.

3. The method of claim 1, wherein the graphic transmission function is a data communication function.

- 20 4. The method of claim 1, wherein the display data transmission step comprises the steps of:
- receiving information about a recipient from the user by the mobile terminal;
- transmitting the display data along with the recipient information to a
- 25 base station by the mobile terminal;
- transmitting the display data along with the recipient information to a mobile switching center (MSC) by the base station; and
- analyzing the recipient information, converting the display data, and transmitting the display data to the recipient by the MSC.

30

5. A method of transmitting display data in a mobile terminal having a display, comprising the steps of:

storing data displayed on the display as display data upon request for capturing of the displayed data from a user;

5 entering a transmission function select mode and displaying a plurality of available transmission functions as menu items; and

transmitting the display data by a selected transmission function upon receipt of a selection command from the user in the transmission function select mode.

10

6. The method of claim 5, wherein the transmission functions are at least one of an SMS function, an E-mail function, and a data communication function.

15 7. A method of transmitting display data in a mobile terminal having a display, comprising the steps of:

storing data displayed on the display as display data upon request for capturing the displayed data from a user;

determining whether the display data is text data or graphic data;

20 entering a text data transmission function select mode and displaying a plurality of available text transmission functions as menu items if the display data is text data;

entering a graphic data transmission function select mode and displaying a plurality of available graphic transmission functions as menu items

25 if the display data is graphic data; and

transmitting the display data by a selected transmission function upon receipt of a selection command from the user in the text data transmission function select mode or the graphic data transmission function select mode.

30 8. The method of claim 7, wherein the text transmission functions

are one of an SMS function, an E-mail function, and a data communication function.

9. The method of claim 7, wherein the graphic transmission
5 functions include a data communication function.

10. A method of transmitting display data in a mobile terminal
having a display, comprising the steps of:

storing data displayed on the display as display data upon request for
10 capturing the displayed data from a user;
requesting the user to enter information about a recipient that the display
data is destined to; and
transmitting the display data to the recipient.

15 11. A method of transmitting display data in a mobile terminal
having a display, comprising the steps of:

determining whether a request for capturing display data has been
received from a user;
storing data displayed on the display as display data upon request of
20 capturing of the displayed data from the user; and
transmitting the display data to a recipient upon receipt of a
transmission request.
